research: enabling haptic experiences *anywhere, anytime*

My research aims at advancing a new generation of **haptic devices** (e.g., those that can create the sense of touch, forces, etc.) that exhibit properties that we became used to expecting from our mobile phones & wearables, **such as extreme mobility, availability anytime, etc**. To advance haptics into this new territory and grant it these novel properties, I engineer custom-made interactive devices that, for instance: allow to feel touch in mixed reality without encumbering our fingerpads, or even haptic devices with virtually infinite battery life. I have published this work as papers at top Human-Computer Interaction (HCI) conferences including **ACM CHI & UIST**, with **Best Paper Awards** and **Honorable Mention Awards.**

education & employment

2019 - present	**PhD student (Computer Science) at University of Chicago** Advisor: Prof. Pedro Lopes
2018	Research Assistant at National Taiwan University
2018	**MS (Degree Computer Science) at National Taiwan University** Thesis: Shape-changing Haptic Interfaces for Virtual Reality Advisor: Prof. Bing-Yu Chen
2016	**BS (Degree Electrical Engineering) at National Taiwan University**

academic awards

Best Paper Awards: UIST 2021, UIST 2020
Best Demo Awards: UIST 2021 (x2)
Honorable Mention Awards: UIST 2022, CHI 2021, CHI 2020, UIST 2019
