research: enabling haptic experiences *anywhere, anytime*

My research aims at advancing a new generation of **haptic devices** (e.g., those that can create the sense of touch, forces, etc.) that exhibit properties that we become used to expecting from our mobile phones & wearables, **such as extreme mobility, availability anytime, etc**. To advance haptics into this new territory and grant it these novel properties, I engineer custom-made interactive devices that, for instance: allow to feel touch in mixed reality without encumbering our fingerpads, or even haptic devices with virtually infinite battery life. I have published this work as papers (7 as the leading author) at top Human-Computer Interaction (HCI) conferences including **ACM CHI & UIST**, with **Best Paper Awards** and **Honorable Mention Awards.**

education

2019 **PhD candidate (Computer Science) at University of Chicago, USA**
advisor: Pedro Lopes (University of Chicago)
committee members: Sean Follmer (Stanford University), Kasper Hornbæk (University of Copenhagen), Ken Nakagaki (University of Chicago), Pedro Lopes (University of Chicago)

2018 **MS (Degree Computer Science) & BS (Degree Electrical Engineering) at National Taiwan University, Taiwan**
thesis: Shape-changing haptic interfaces for virtual reality
advisor: Bing-Yu 'Robin' Chen (National Taiwan University)

fellowship

Eckhardt Graduate Scholarship (USD 40k total, 2019-2024), University of Chicago
William Rainey Harper Dissertation Fellowship (2023-2024), University of Chicago

academic awards

Best Paper Awards: UIST 2021, UIST 2020
Best Demo Awards: UIST 2021 (x2)
Honorable Mention Awards: UIST 2022, CHI 2021, CHI 2020, UIST 2019

publications (ACM CHI, UIST* & Science Advances)

* ACM CHI and UIST are the premier venues for technical Human-Computer Interaction (HCI) publications, fully peer-reviewed and at an acceptance rate of 20-25%. These are regarded as top-tier in the field, even when considering HCI journals, and Computer Science is a conference-focused discipline.
